Portlock Windows Update Manager

Portlock Windows Update Manager (PWUM) provides systems with the latest Windows Updates and does not require the use of Internet Explorer. Downloading and installing the latest Windows Updates improves security and reliability.

PWUM can be purchased as an individual utility and run on a live Windows system. PWUM is also built into the Computer Management utility in Portlock SMART Suite for Windows.

PWUM provides Server Core users a graphical user interface for managing Windows Updates. Both manual and automatic installation methods are available. Windows Updates can be downloaded and saved for installation at a later time. Users can view both installed updates and updates that are not yet installed, with detailed descriptions of each one. PWUM can also export XML datasheets for data reports.

Windows Support (32-bit and 64-bit):

- Windows 2000 SP4
- Windows XP Pro, Home, Media Center, SP1/SP2/SP3
- Windows Server 2003 Web, Datacenter, Standard, Enterprise SP1/SP2/R2
- Windows Small Business Server SP1/SP2/R2
- Windows Vista Ultimate, Home Premium, Business SP1/SP2
- Windows Server 2008 Standard, Enterprise, Datacenter, Web, Core
- Microsoft Hyper-V Server 2008

Key Features:

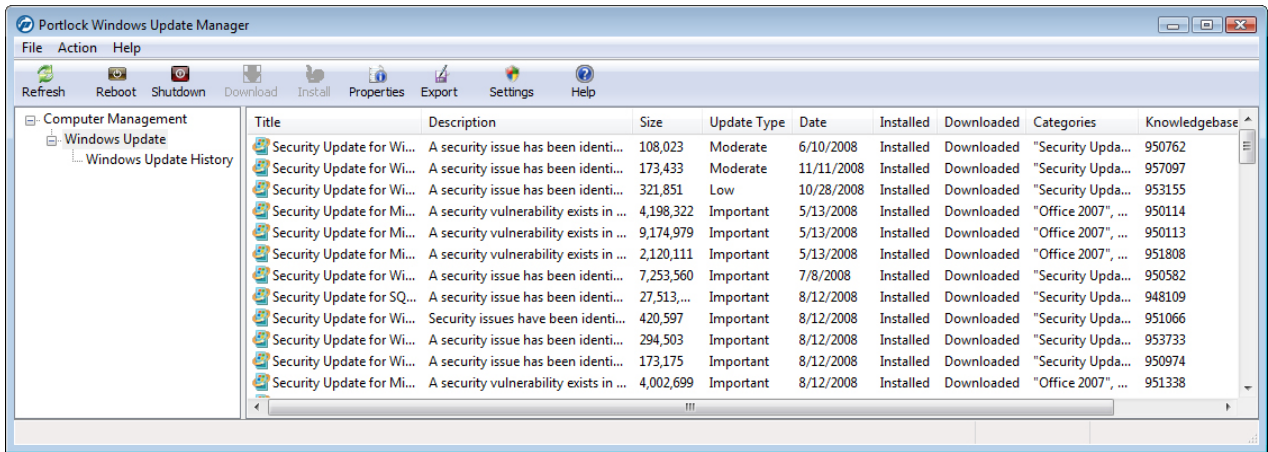

- Enable/Disable Automatic Updates
- XML data export
- Windows Update History
- View updates not installed
- View updates currently installed
- Download updates without installation
- Internet Explorer not required
- System Information
